

# The $\tau$ vs $\pi$ argument is really long and interesting

It is mostly a notational argument

**Malcolm Ramsay**

September 20, 2016

# Why use $\tau$ when there is $\pi$

## Theorem

$\tau$  is great when dealing with circles

### 1. Fourier transforms

$$\hat{f}(\zeta) = \int_{-\infty}^{+\infty} f(x) e^{-2\pi i x \zeta} dx \quad (1)$$

# Why use $\tau$ when there is $\pi$

## Theorem

$\tau$  is great when dealing with circles

1. Fourier transforms

$$\hat{f}(\zeta) = \int_{-\infty}^{+\infty} f(x) e^{-2\pi i x \zeta} dx \quad (1)$$

2. A simple pendulum

$$T \approx 2\pi \sqrt{\frac{L}{g}} \quad (2)$$
